

## ADVANTAGES

- EFFORTLESS PLOWING
- SALT AND SAND SAVINGS
- ASPHALT FRIENDLY BLADE
- GREAT PERFORMANCE IN ROAD MAINTENANCE
- GRAVEL SAVINGS
- THROUGH HARDENED ALLOY STEEL

# SHARP BLADES

## INTRODUCING THE S12 AND S16HD TXS SHARP BLADES

### **Effortless plowing:**

The TXS SHARP BLADE is designed to make winter road snow plowing effortless when you encounter compacted snow & ice.

### **Salt and sand savings:**

The TXS SHARP BLADE will easily cut up the compacted snow & ice leaving grooves where salt and sand will remain on the road and not go into the ditch.

### **Asphalt friendly blades:**

Using the TXS SHARP BLADE removes thin hard ice down to a flat, non-slippery road surface without damaging the asphalt.

For gravel road maintenance the TXS SHARP BLADE performs like no other grader blade.

### **Gravel savings:**

The SHARP design of the blade easily cut up the hardest compacted gravel, therefore no need to add any new gravel to the road surface.

TXS SHARP BLADE are made from special alloy steel and through hardened to 500HB with high impact resilience to -40°.

TXS SHARP BLADE are available in thicknesses of 12mm & 16mm in lengths of 3-4 & 5 ft.
